Food & Drug Administration
Attn.: Docket No. 98N-1038

July 14, 1999

This letter is a notification to the FDA that I am completely against the proposed revision of federal requirements for labeling foods exposed to radiation.

It has been my understanding that the laws/regulations were being changed to require better labeling to include more information to benefit consumer awareness. I feel it is my right to know if foods are contaminated with radiation so that I may choose whether or not to purchase them. I do not believe that the FDA has the right to take away my choice.

Sincerely,

Karin Taylor
